Classroom Management Tips

Resources

- LEGO® Education Simple and Powered Machines (9686)
- Lesson plan for each project
- Student worksheet for each project
- Inspirational images for each project
- Modeling materials already available in your class

How much time do you need?

Each lesson is designed to take 90 minutes. If you work in shorter class periods, you can break this down into two 45 minute sessions.

Preparation

It is important to establish student groups. Groups of two work well. Ensure that each student has a copy of the MAKER worksheet for recording their design process. They will also need the LEGO Education Simple and Powered Machines set (one set for every two students is recommended).

Prior Learning

Before beginning these MAKER activities, it is recommended that students complete the principle models activities from the booklets supplied with each brick set.

However, if you prefer a more open-ended, explorative method, you can start out with this activity and allow students to find help on their own by referring to the principle models booklets.

The LEGO Education MAKER (Design) Process

Defining the Problem

It is important that students define a real problem to solve from the start. The connect images are provided to help students to think about designing solutions for the needs of others, and not just for themselves. At this stage of the process, it is important that you not show examples of a final or sample solution.

Brainstorm

Brainstorming is an active part of making. Some students will find it easier to explore their thoughts through hands-on experimentation with the LEGO bricks, and others will prefer to make sketches and notes. Group work is essential, but it is important to allow time for students to work alone before sharing their ideas with their group.

Define the Design Criteria

Discussing and finding an agreement about the best solution to build can involve a lot of negotiation, and may require different techniques depending on the students' skills. For example:

- Some students draw well.
- Others may build part of a model and then describe what they mean.
- Other students may be good at describing a strategy.

Encourage an ethos where students can share anything, no matter how abstract it might sound. Be active during this phase and ensure that the ideas the students choose are achievable.

It is important that the students set clear design criteria. Once the solution to the problem has been made, the students will return to these criteria, which will then form the basis for testing how well the solution works.

Go MAKE

Students must make one of their group's ideas using the LEGO® set, and can use other materials if needed. If they are finding it hard to build their idea, encourage them to break problems down into smaller parts. Explain that they do not have to come up with the whole solution from the start. Remind students that this process is iterative and they must test, analyse, and revise their idea as they go.

Using this MAKER process does not mean you are following an inflexible set of steps. Instead, think of it as a set of practices.

For example, brainstorming may be prominent at the beginning of the process. However, students may also need to brainstorm ideas when they are trying to figure out ways to improve their idea, or when they have a bad test result and they must change some features of their design.

Review and Revise Your Solution

To help students develop their critical thinking and communication skills, you may wish to have students from one group observe and critique another group's solution. Peer review and formative feedback helps both the students giving, and the students receiving the feedback to improve their work.

Communicate Your Solution

The student worksheet is helpful for basic documentation of the project. Students can also refer to it when presenting their work in front of the class. You may also wish to use the project as a portfolio for performance evaluations or for student self-evaluation.

Assessment

Where can I find the assessment materials?

Assessment materials are provided for the first three projects. You will find them at the end of each student worksheet.

What learning goals are assessed?

Students use the student worksheet assessment rubric to evaluate their design work according to the learning goals. Each rubric includes four levels: Bronze, Silver, Gold, and Platinum. The intention of the rubric is to help students reflect on what they have done well in relation to the learning goals and what they could have done better.

Design criteria example:

The design must...
The design should...
The design could...

Share It

We encourage you to share your students' brilliant projects on the appropriate social media platforms using the hashtag **#LEGOMAKER**.

Students can also share their own projects if they are over 13 years old and if it complies with the rules of your school / MAKER space.

The LEGO® Education MAKER (Design) Process

Lesson Plan – Make a Digital Accessory

Learning Goals

After completing this lesson, students will have:

- Defined a clear design need
- Developed their ability to iterate and improve design solutions
- Developed their problem-solving and communication skills

Duration

2 x 45 mins (90 mins)

Preparation

Ensure that each student has a copy of the MAKER worksheet for recording their design process. They will also need the LEGO® Simple and Powered Machines set (one set for every two students is recommended). For this MAKER task you will need a mobile phone and/or a tablet device for testing.

Other Materials Required (Optional)

- Rubber bands
- Thin cardboard
- Thin plastic sheet

Prior Learning

Before beginning this MAKER activity, it is recommended that students complete the following principle models booklets supplied with each 9686 brick set:

- Simple Machines – Lever, Pulley and Screw
- Mechanisms – Gear, Cam, Pawl and Ratchet
- Structures

However, if you prefer a more open-ended, explorative method, you can start out with this activity and allow students to find help on their own by referring to the principle models booklets.

Procedure

1. Introduction/Discussion

Hand out the worksheets and allow the students to interpret the activity for themselves, or read the MAKER connect text aloud to set the scene.

2. Defining the Problem

As students look at the connect images and questions, facilitate a discussion to steer them toward a problem. Once they have decided upon a problem to solve, ensure that they record it on their worksheet.

3. Brainstorm

Students should initially work independently, spending three minutes to generate as many ideas as they can to solve the problem. They can use the bricks from the LEGO set during the brainstorming process, or sketch out their ideas in the space provided on the worksheet.

Students can now take turns sharing their ideas within their groups. Once all of the ideas have been shared, each group should select the best idea(s) to make. Be prepared to help facilitate this process to ensure that the students choose something that is possible to make. Encourage diversity, not all student groups have to make the same thing.

Students must define a problem before they can start brainstorming ideas.

4. Define the Design Criteria

Students must record up to three design criteria on their worksheet so that they can refer to it when they review and revise their solution.

5. Go MAKE

Students make one of the ideas using the LEGO® Simple and Powered Machines set and other materials as needed.

Reinforce that students do not have to come up with the whole solution from the start. For example, if they are making a stand for a mobile phone, they could explore how to support the phone before thinking about how the viewing angle can be adjusted.

During the making process, remind students to test and analyse their idea as they go, making improvements where necessary. If you want students to submit their documentation at the end of the lesson, ensure that they record their design journey during the making stage using sketches and photos of their models.

6. Review and Revise Your Solution

Students test and evaluate their designs against the design criteria they recorded before they started making their solution. They can record notes on their student worksheet.

7. Communicate Your Solution

Allow time for each student or student group to present what they have made to the class. A good way to do this is to set out a table large enough to display all of the models. If time is short, two groups can present to each other.

8. Assessment

Students use the student worksheet assessment rubric to evaluate their design work according to the learning goals. Each rubric includes four levels: Bronze, Silver, Gold, and Platinum. The intention of the rubric is to help students reflect on what they have done well in relation to the learning goals and what they could have done better.

9. Tidy Up

Ensure that you leave enough time at the end of the lesson to break the models down and sort them back into the LEGO boxes. You will need approximately 10 minutes to do this.

Design criteria example:

The design must...
The design should...
The design could...

How well does it work?
What if...?

Possible Digital Accessory Solution, for Inspiration

Note: You are advised not to share these images with students.

MAKER Connect – Make a Digital Accessory

More and more people are interacting with mobile technology on a daily basis. They use their devices for a number of different things such as telephone calls, surfing the web, playing games, watching movies, and listening to music. With this, they also face many challenges.

Look at the images below.

- What can you see?
- What problems can you see?
- How did these problems occur?
- What new design opportunities are there?

Student Worksheet – Make a Digital Accessory

Name(s): _____ Date: _____

Defining the Problem

What problems can you see in the pictures? Pick one problem and explain it below.

Brainstorm

Individual work: Now that you have defined a problem, take three minutes to generate ideas for solving it. Be prepared to share your ideas with your group.

Group work: Share and discuss your ideas for solving the problem.

Documenting your work is very important during the design process. Record as much as you can through sketches, photos and notes.

Use LEGO® bricks and sketches to explore your ideas.

Sometimes simple ideas are the best ideas.

Define the Design Criteria

You should have generated a number of ideas. Now select the best one to make.

Based upon your brainstorming discussion, write down two or three specific design criteria that your design must meet:

1. _____
2. _____
3. _____

Go MAKE

It is time to start making. Use the components from the LEGO® set to make your chosen solution. Test and analyse your design as you go and record any improvements that you make.

Review and Revise Your Solution

Have you managed to solve the problem that you defined at the beginning of the lesson? Look back at your three design criteria.

How well does your solution work? Use the space below to suggest three improvements to your design.

1. _____
2. _____
3. _____

Communicate Your Solution

Now that you have finished, make a sketch or take a photo of your model, label the three most important parts, and explain how they work. You are now ready to present your solution to the class.

Assessment

				
GOALS	BRONZE	SILVER	GOLD	PLATINUM
MAKER Task: _____ _____	• We successfully built and tested one design based upon a single design criteria and design idea.	• We successfully used two design criteria and ideas to build a solution to the defined problem.	• We met Silver, and refined our idea to improve it further through testing, revising, and retesting.	• We met Gold, and successfully met all three design criteria.
Designing Solutions	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Well done! What will you make next?

Design criteria example:
The design must...
The design should...
The design could...

You can use other materials from around the classroom.

Print your photos and attach all of your work to a large sheet of paper or cardboard.

Lesson Plan – Wearables

Learning Goals

After completing this lesson, students will have:

- Defined a clear design need
- Developed their ability to iterate and improve design solutions
- Developed their problem-solving and communication skills

Duration

2 x 45 mins (90 mins)

Preparation

Ensure that each student has a copy of the MAKER worksheet for recording their design process. They will also need the LEGO® Simple and Powered Machines set (one set for every two students is recommended).

Other Materials Required (Optional)

- Card stock
- Thin plastic sheet
- Neoprene rubber sheet

Procedure

1. Introduction/Discussion

Hand out the worksheets and allow the students to interpret the activity for themselves, or read the MAKER connect text aloud to set the scene.

2. Defining the Problem

As students look at the connect images and questions, facilitate if necessary a discussion to steer them toward a problem. Once they have decided upon a problem to solve, ensure that they record it on their worksheet.

3. Brainstorm

Students should initially work independently, spending three minutes to generate as many ideas as they can to solve the problem they have singled out. They can use the bricks from the set during the brainstorming process, or sketch out their ideas in the space provided on the worksheet.

Students can now take turns sharing their ideas within their groups. Once all of the ideas have been shared, each group should select the best idea(s) to make. Be prepared to help facilitate this process to ensure that the students choose something that is possible to make. Encourage diversity, not all student groups have to make the same thing.

4. Define the Design Criteria

Students must record up to three design criteria on their worksheet so that they can refer to it when they review and revise their solution.

Students must define a problem before they can start brainstorming ideas.

Design criteria example:
The design must..
The design should..
The design could..

5. Go MAKE

Students make one of the ideas using the LEGO® Simple and Powered Machines set and other materials as needed.

Reinforce that students do not have to come up with the whole solution from the start. For example, if they are making some eyewear/glasses, they could explore the shape and fit on the face before looking at the temples (ear supports).

During the making process, remind students to test and analyse their idea as they go, making improvements where necessary. If you want students to submit their documentation at the end of the lesson, ensure that they record their design journey during the making stage using sketches and photos of their models.

6. Review and Revise Your Solution

Students test and evaluate their designs against the design criteria they recorded before they started making their solution. They can record notes on their student worksheet.

7. Communicate Your Solution

Allow time for each student or student group to present what they have made to the class. A good way to do this is to set out a table large enough to display all of the models. If time is short, two groups can present to each other.

8. Assessment

Students use the student worksheet assessment rubric to evaluate their design work according to the learning goals. Each rubric includes four levels: Bronze, Silver, Gold, and Platinum. The intention of the rubric is to help students reflect on what they have done well in relation to the learning goals and what they could have done better. Each rubric can be linked to engineering-related learning goals.

9. Tidy Up

Ensure that you leave enough time at the end of the lesson to break the models down and sort them back into the LEGO boxes. You will need approximately 10 minutes to do this.

How well does it work?
What if...?

Possible Wearable Technology Solution, for Inspiration

Note: You are advised not to share these images with students.

MAKER Connect – Make a Wearable

Wearables or wearable technology is being used more and more in everyday life. We see wearable technology in the form of health monitors, mind-controlled and gesture-controlled devices, invisibles, VR headsets, and smart watches that can pay for your shopping and even reveal your flight boarding pass. These are just a few of the many products that already exist.

Look at the images below.

- What can you see?
- What problems can you see?
- How did these problems occur?
- What new design opportunities are there?

Student Worksheet – Make a Wearable

Name(s): _____ Date: _____

Defining the Problem

What problems can you see in the pictures? Pick one problem and explain it below.

Brainstorm

Individual work: Now that you have defined a problem, take three minutes to generate ideas for solving it. Be prepared to share your ideas with your group.

Group work: Share and discuss your ideas for solving the problem.

Documenting your work is very important during the design process. Record as much as you can through sketches, photos and notes.

Use LEGO® bricks and sketches to explore your ideas.

Sometimes simple ideas are the best ideas.

Define the Design Criteria

You should have generated a number of ideas. Now select the best one to make.

Based upon your brainstorming discussion, write down two or three specific design criteria that your design must meet:

1. _____
2. _____
3. _____

Go MAKE

It is time to start making. Use the components from the LEGO® set to make your chosen solution. Test and analyse your design as you go and record any improvements that you make.

Review and Revise Your Solution

Have you managed to solve the problem that you defined at the beginning of the lesson? Look back at your three design criteria.

How well does your solution work? Use the space below to suggest three improvements to your design.

1. _____
2. _____
3. _____

Communicate Your Solution

Now that you have finished, make a sketch or take a photo of your model, label the three most important parts, and explain how they work. You are now ready to present your solution to the class.

Assessment

	 BRONZE	 SILVER	 GOLD	 PLATINUM
GOALS				
MAKER Task: _____ _____	• We understood the design problem.	• We defined a design problem and we used one design criteria and idea to build the solution.	• We achieved Silver, and we used two design criteria and ideas to build the solution.	• We achieved Gold, and we used three design criteria and ideas to build an effective solution.
Defining Problems	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Well done! What will you make next?

Design criteria example:
The design must...
The design should...
The design could...

You can use other materials from around the classroom.

Print your photos and attach all of your work to a large sheet of paper or cardboard.

Lesson Plan – Make a Repeated Pattern

Learning Goals

After completing this lesson, students will have:

- Defined a clear design need
- Developed their ability to iterate and improve design solutions
- Developed their problem-solving and communication skills

Duration

2 x 45 mins (90 mins)

Preparation

Ensure that each student has a copy of the MAKER worksheet for recording their design process. They will also need the LEGO® Simple and Powered Machines set (one set for every two students is recommended).

Other Materials Required (Optional)

- Rubber bands
- Sheets of plain paper (A3 and A4)
- Colored felt pens or colored pencils

Procedure

1. Introduction/Discussion

Hand out the worksheets and allow the students to interpret the activity for themselves, or read the MAKER connect text aloud to set the scene.

2. Defining the Problem

As students look at the connect images and questions, facilitate a discussion to steer them toward a problem. Once they have decided upon a problem to solve, ensure that they record it on their worksheet.

3. Brainstorm

Students should initially work independently, spending three minutes to generate as many ideas as they can to solve the problem. They can use the bricks from the set during the brainstorming process, or sketch out their ideas in the space provided on the worksheet.

Students can now take turns sharing their ideas within their groups. Once all of the ideas have been presented, each group should select the best idea(s) to make. Be prepared to help facilitate this process to ensure that the students choose something that is possible to make. Encourage diversity, not all student groups have to make the same thing.

4. Define the Design Criteria

Students must record up to three design criteria on their worksheet so that they can refer to it when they review and revise their solution.

Students must define a problem before they can start brainstorming ideas.

Design criteria example:
The design must...
The design should...
The design could...

5. Go MAKE

Students make one of the ideas using the LEGO® Simple and Powered Machines set and other materials as needed.

Reinforce that students do not have to come up with the whole solution from the start. For example, if they are making a motorised drawing machine, they could first explore how to draw simple circles before drawing more complex shapes.

During the making process, remind students to test and analyse their idea as they go, making improvements where necessary. If you want students to submit their documentation at the end of the lesson, ensure that they record their design journey during the making stage using sketches and photos of their models.

6. Review and Revise Your Solution

Students test and evaluate their designs against the design criteria they recorded before they started making their solution. They can record notes on their student worksheet.

7. Communicate Your Solution

Allow time for each student or student group to present what they have made to the class. A good way to do this is to set out a table large enough to display all of the models. If time is short, two groups can present to each other.

8. Assessment

Students use the student worksheet assessment rubric to evaluate their design work according to the learning goals. Each rubric includes four levels: Bronze, Silver, Gold, and Platinum. The intention of the rubric is to help students reflect on what they have done well in relation to the learning goals and what they could have done better.

9. Tidy Up

Ensure that you leave enough time at the end of the lesson to break the models down and sort them back into the LEGO boxes. You will need approximately 10 minutes to do this.

How well does it work?
What if...?

Possible Repeated Pattern Solution, for Inspiration

Note: You are advised not to share these images with students.

MAKER Connect – Make a Repeated Pattern

We live in a world full of symmetry and math. From this, many artists and designers find inspiration.

Look at the images below.

- What can you see?
- What patterns can you see?
- How did these patterns occur?
- What new design opportunities are there?

Student Worksheet – Make a Repeated Pattern

Name(s): _____ Date: _____

Defining the Problem

What problems can you see in the pictures? Pick one problem and explain it below.

Brainstorm

Individual work: Now that you have defined a problem, take three minutes to generate ideas for solving it. Be prepared to share your ideas with your group.

Group work: Share and discuss your ideas for solving the problem.

Documenting your work is very important during the design process. Record as much as you can through sketches, photos and notes.

Use LEGO® bricks and sketches to explore your ideas.

Sometimes simple ideas are the best ideas.

Define the Design Criteria

You should have generated a number of ideas. Now select the best one to make.

Based upon your brainstorming discussion, write down two or three specific design criteria that your design must meet:

1. _____
2. _____
3. _____

Go MAKE

It is time to start making. Use the components from the LEGO® set to make your chosen solution. Test and analyse your design as you go and record any improvements that you make.

Review and Revise Your Solution

Have you managed to solve the problem that you defined at the beginning of the lesson? Look back at your three design criteria.

How well does your solution work? Use the space below to suggest three improvements to your design.

1. _____
2. _____
3. _____

Communicate Your Solution

Now that you have finished, make a sketch or take a photo of your model, label the three most important parts, and explain how they work. You are now ready to present your solution to the class.

Assessment

	 BRONZE	 SILVER	 GOLD	 PLATINUM
GOALS				
MAKER Task: _____ _____	• We drew and labeled the parts of our design.	• We met Bronze and we identified the location of the key component parts responsible for the pattern we observed.	• We met Silver and we included a diagram showing the pattern we observed.	• We met Gold and we used words and a diagram to explain how this new design caused the pattern we observed.
Obtaining, Evaluating and Communicating Information	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Well done! What will you make next?

Design criteria example:
The design must...
The design should...
The design could...

Print your photos and attach all of your work to a large sheet of paper or cardboard.

Additional MAKER Briefs

The MAKER Projects

Start your MAKER journey with the following three activities:

- Make a Digital accessory
- Make a Wearable
- Make a Repeated Pattern

Once you have completed these three projects, try out one from the list below using the same MAKER design process.

1. Go Make It Carry Something

Every day we see fragile things being safely moved from one place to another. Some examples are wheelbarrows, medical stretchers, ski-lifts, and cable cars.

2. Go Make a mobile game controller

Many mobile games played on smart phones or similar devices, require the device to be tilted to steer or control the experience. Games such as flight simulators require different types of controls to others such as motor racing.

3. Go Make a new device to help in the classroom

There are lots of opportunities to design new products or devices that you can use in your classroom. For example: how do you retrieve pens that drop on the floor in those hard to reach places.

A generic Student Worksheet, and self - assessment rubric for students to record their design process is included at the end of these materials.

Student Worksheet for your own MAKER project

Name(s): _____ Date: _____

Defining the Problem

What problems can you see in the pictures? Pick one problem and explain it below.

Brainstorm

Individual work: Now that you have defined a problem, take three minutes to generate ideas for solving it. Be prepared to share your ideas with your group.

Group work: Share and discuss your ideas for solving the problem.

Documenting your work is very important during the design process. Record as much as you can through sketches, photos and notes.

Use LEGO® bricks and sketches to explore your ideas.

Sometimes simple ideas are the best ideas.

Define the Design Criteria

You should have generated a number of ideas. Now select the best one to make.

Based upon your brainstorming discussion, write down two or three specific design criteria that your design must meet:

1. _____
2. _____
3. _____

Go MAKE

It is time to start making. Use the components from the LEGO® set to make your chosen solution. Test and analyse your design as you go and record any improvements that you make.

Review and Revise Your Solution

Have you managed to solve the problem that you defined at the beginning of the lesson? Look back at your three design criteria.

How well does your solution work? Use the space below to suggest three improvements to your design.

1. _____
2. _____
3. _____

Communicate Your Solution

Now that you have finished, make a sketch or take a photo of your model, label the three most important parts, and explain how they work. You are now ready to present your solution to the class.

Assessment

				
GOALS	BRONZE	SILVER	GOLD	PLATINUM
MAKER Task: _____ _____	• We successfully built and tested one design based upon a single design criteria and design idea.	• We successfully used two design criteria and ideas to build a solution to the defined problem.	• We met Silver, and refined our idea to improve it further through testing, revising, and retesting.	• We met Gold, and successfully met all three design criteria.
